SUMMARY

Backend Engineer with 3+ years of experience in Java-based systems, distributed architecture, and Azure infrastructure. Proven record of transforming monoliths into scalable microservices, optimizing performance, and mentoring engineers to elevate backend delivery excellence.

WORK EXPERIENCE

UHG | Backend Team Lead (2022 - PRESENT | HYDERABAD)

- Led a team of 2 developers and delivered scalable backend services using Spring Boot.
- Reduced API latency by 40% and cloud costs by 35% through optimization.
- Mentored 3 engineers on system bottlenecks and clean backend design.
- Migrated legacy apps to Azure; provisioned infra using Terraform + GitHub Actions.
- Built Kafka event pipelines with DLQ handling and idempotent consumers.

TECHNICAL PROJECTS

JAVA 11 TO 21 MIGRATION | Performance Optimization

- Migrated 15+ microservices to Java 21 with Virtual Threads support.
- **Result:** 45% higher throughput and 50% reduced memory usage.

ASYNC LOGGING WITH LMAX DISRUPTOR | Monolith Optimization

- Integrated asynchronous logging in a monolith using Log4j2 and Disruptor.
- **Result:** Reduced request latency by 40%.

KAFKA STREAMING AUDIT SYSTEM | Event Architecture

- Developed Kafka producers/consumers with DLQ and auditing dashboards in Azure.

WORKFLOW PARALLELIZATION | Concurrency Optimization

- Refactored order processing to use `CompletableFuture` and thread pools.
- **Result:** Reduced workflow latency from 2000ms to 1100ms.

SKILLS

LANGUAGES

Java • SQL • Bash

FRAMEWORKS / TOOLS

Spring Boot • Kafka • Log4j2
Terraform • GitHub Actions • JMeter

CLOUD & INFRA

Azure App Services • Azure DevOps
App Insights • KQL Queries

FOCUS AREAS

Performance Optimization
Monolith to Microservice Migration
Backend System Design
Mentorship & Architecture
